## Sc. 9 <br> CHEMISTRY REVIEW <br> REVIEW WORKSHEET

Name $\qquad$
Date $\qquad$
BLK $\qquad$

## The student should be able to:

1. Describe the classification of matter.
2. Describe the conservation of mass.
3. Identify products and reactions in a chemical equation.
4. Describe the structure of an atom including its parts.
5. Locate elements on the periodic table and use the periodic table to determine details of atomic structure such as: \# of protons, neutrons and electrons; mass number \& atomic mass; number of electron orbits and \# of electrons on each orbit
6. Make "Bohr diagrams" of atoms, ions and isotopes
7. Define atom, element, ion, isotope, compound, molecule, bond, ionic bond, covalent bond
8. Describe patterns on the periodic table
9. Write chemical formulas for ionic and covalent compounds.
10. Write names for ionic and covalent compounds
11. Explain how ionic and covalent bonds form \& which is generally stronger
12. Explain why alkali and halogen elements are so chemically active \& the inert elements are not

## Some atomic definitions are:

Symbol: an abbreviation of the name of an element
Atomic number: the number of protons in the nucleus of an element. All atoms of the same element have the same atomic number.
Atoms of the same element are electrically neutral and thus:
Atomic \# = \# of protons = \# of electrons
Mass number: the total number of protons and neutrons in an element
Mass number = \# of protons + \# of neutrons
So: \# of neutrons = mass number - \# of protons

Isotope: an element whose atomic number is constant but whose mass number varies due to a variation in the number of neutrons in atoms of the element.
Example: Chlorine has two isotopes, chlorine 35 and Chlorine 37. The symbols for $\mathrm{Cl}^{35} \mathrm{and}^{31}{ }^{37}$ are written as follows:
${ }_{17}^{35} \mathrm{Cl}$ and ${ }_{17}^{37} \mathrm{Cl}$

Atomic Mass: the weighted average mass of all the natural isotopes of an element
Elements are arranged on the periodic table in order of increasing atomic number, with the vertical columns being called groups and the horizontal rows being called periods. Each new period represents a different number of electron orbits and the members of each group have similar chemical properties.

Period I has one orbit and Group 1 are the alkali metals: Period 2 has two orbits and Group VII are the Halogen Gases; period 3 has three orbits and Group VIII are the Inert Gases.

BLK $\qquad$

1. Classification of MATTER. Fill in the following chart (7).

2. Define:
a) HOMOGENEOUS (1) $\qquad$
b) HETEROGENEOUS (1)
3. Which of the following is: HOMOGENEOUS (box) or HETEROGENEOUS (circle) (3):

Element, Compound, Mixtures, Suspensions, Solutions, Mechanical mixtures
4. State the Law of conservation of mass (1):
5. Identify the PRODUCTS and the REACTANTS in the following EQUATION (1):
sodium chloride + lithium phosphide $\rightarrow$ sodium phosphide + lithium chloride
6. a) What is an electron orbit? (1)
b) How many electrons are in the outer orbit (valence shell) of the following elements? (6)

| Lithium atom |  | Na | Element that has 9 protons <br> and 10 neutrons |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Lithium ion |  | ${ }_{1}^{1} \mathrm{H}$ (Hydrogen) |  | ${ }_{1}^{2} H$ (Deuterium) |  |
| Atomic \# 35 |  | Element with a mass \# of 40 |  | Element with an atomic \# 20 <br> and an ion charge of +2 |  |
| Element with 8 electrons |  | Krypton atom |  | Carbon -14 |  |

Name $\qquad$
$\qquad$
BLK $\qquad$
7. What is in common about the electron structure of: (3)
a) alkali metals
b) halogen nonmetals
c) Inert gases
8. What is common about the electron structure of all elements in the same period? (1)
4. How many electron orbits are there in: (1)

| a carbon atom | a chlorine isotope | an antimony atom |
| :---: | :---: | :---: |
|  |  |  |

9. Why are the inert gases not chemically reactive? (1)
10. What is it about the electron structure of the Alkali metals and the Halogen nonmetals that makes them so highly chemically active? (2)

| Akali metals | Halogen nonmetals |
| :---: | :---: |
|  |  |

11. What happens to the atomic number, the number of protons, the number of electrons and the atomic mass as you move from left to right along the third period of the periodic table? (4)

| atomic number | number of protons | number of electror | s atomic mass |
| :--- | ---: | ---: | ---: |
|  |  |  |  |
|  |  |  |  |

12. Draw Bohr models for each of the following elements. Be sure to include the correct number of protons, neutrons and electrons. (the given circles are the atomic nuclei) (12)

Use a p for proton, $\boldsymbol{n}$ for neutron and $\mathbf{e}$ for electron
a) Ne
b) mass number 28

c) atomic \# 39
d) ${ }_{1}^{3} H$ (Hydrogen-3 or Tritium)

13. In your own words and with reference to a specific example, describe how an ionic bond forms.(2)
14. In your own words and with referenced to a specific example describe how a covalent bond forms(2)
15. Complete the following table (6)

| Compound <br> formula | Type of compound <br> (ionic or covalent) | \# of elements | \# of atoms |
| :--- | :--- | :--- | :--- |
| $\mathrm{Mn}_{3} \mathrm{O}_{2}$ |  |  |  |
| $\mathrm{Os}_{2}\left(\mathrm{CO}_{3}\right)_{4}$ |  |  |  |
| $\mathrm{C}_{2} \mathrm{H}_{12} \mathrm{O}_{6}$ |  |  |  |

## CHEMISTRY REVIEW

REVIEW WORKSHEET

Name $\qquad$
Date $\qquad$
BLK $\qquad$
16. Write the formula for the following (5):
a) potassium chloride
b) lithium sulphide
c) nickel (III) sulphide
d) silver nitrate
e) magnesium hydroxide
f) gold (II) fluoride
g) lead (IV) oxide
h) sodium oxide
i) sodium acetate
j) iron (II) sulphate

17. Write the name for the following compounds (5).
a) NaI
b) $\mathrm{K}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}$
c) $\mathrm{CuSO}_{4}$
d) FeO
e) $\mathrm{Al}\left(\mathrm{MnO}_{4}\right)_{3}$

f) $K_{3} P$
g) AgI
h) $\mathrm{LiNO}_{3}$
i) $\mathrm{Ni}_{2} \mathrm{~S}_{3}$
j) $\mathrm{Au}_{2} \mathrm{O}$
$\qquad$
$\qquad$
18. Determine the number of atoms of each element in the following. (Remember to total each element!!) (5)
a) $3 \mathrm{H}_{2} \mathrm{O}_{2}$
b) $7 \mathrm{Na}_{2} \mathrm{O}+2 \mathrm{H}_{2} \mathrm{SO}_{4}$ $\qquad$
c) $9 \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{O}$
d) $3 \mathrm{C}_{5} \mathrm{H}_{10} \mathrm{O}_{5}+\mathrm{H}_{2} \mathrm{SO}_{4}$ $\qquad$
e) $2 \mathrm{Na}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}+3 \mathrm{KCl}$ $\qquad$
8. Write the name and the formula for the following combinations:
a) Magnesium \& Fluorine: Name $\qquad$
Formula $\qquad$
b) Aluminum \& Sulphate: Name $\qquad$
Formula $\qquad$
c) Ammonium \& Oxygen: Name

Formula $\qquad$
d) Nickel (III) \& Bromine: Name

Formula $\qquad$

BONUS! Balance the following chemical equations: $(+1)$
a) __ $\mathrm{Al}+\ldots \mathrm{O}_{2} \rightarrow \ldots \mathrm{Al}_{2} \mathrm{O}_{3}$
b) $\mathrm{SnCl}_{2} \rightarrow$ _S $\mathrm{Sn}+$ CuCl
c) $\qquad$ $\mathrm{K}_{3} \mathrm{PO}_{4}+$ $\qquad$ $\mathrm{NaOH} \rightarrow$ $\qquad$ $\mathrm{Na}_{3} \mathrm{PO}_{4}+$ $\qquad$ KOH
